

# BIG3KIT | Installation

## Thank You For Purchasing This XS Power Product!

We take great pride in our quality, value and performance and believe that this product will offer you trouble free operation throughout its lifetime providing you take care to follow the simple instructions.

This kit is designed to help you correctly and safely install your new XS Power BIG 3 Kit. Designed with the installer in mind, the BIG 3 Kit can be completed with very few tools and requires no wire crimping if the directions are followed correctly. Please see the steps below that will help to facilitate a fast, safe and easy installation of your new XS Power BIG 3 Kit. Be sure to also clean connection points before installation to insure proper connection and ground.

**Step 1** Connect one of the two ground cables between the battery and a solid chassis ground. This cable can either replace the existing ground, or can be used in addition to the existing ground cable.

**Step 2** Connect the second of the two ground cables between the alternator ground stud and the chassis. If a ground stud is not available, using one of the rear alternator mounting bolts will also work the same.

**Step 3** Connect the remaining power cable between the alternator and the battery, and keep clear of moving engine components and extreme heat items like the radiator, valve covers and exhaust manifolds.

**Step 4** Safely tie up and secure each individual cable with the provided ties and cable clamps.

**Note:** It is recommended when stacking ring terminals to stack the highest gauge cable on the bottom of the stack. We also recommend to leave existing power and ground cables in place if there is any uncertainty as to what else they may be used for.

## Please Use Precaution During Installation

- ⚠ Pay special attention to avoid drilling into or penetrating the gas tank area.
- ⚠ Avoid drilling into hoses, vents and other cables.
- ⚠ Keep cables clear of moving parts like suspension parts and the drivetrain.
- ⚠ Keep cables and components away from extreme heat areas like the exhaust or manifold.
- 👁 Always shield eyes, explosive gases can cause injury and blindness.
- 🚫 No spark, flame or smoking during installation.
- 👉 Sulfuric Acid can cause severe burns and blindness.
- 👁 Flush eyes immediately with water and get medical help immediately.

## Enjoy Your New Beefy Electrical System!
